Summary

Hello, I'm Richard, a skilled and passionate data analyst with over 3+ years of experience. My expertise lies in harnessing the power of data to drive business insights and decision-making. I excel in leveraging various tools and technologies, including Power BI, Python, and SQL, to extract meaningful information from complex datasets.

Throughout my career, I have honed my analytical skills across different industries, making a significant impact on both hospitality and retail domains. In the hospitality sector, I have specialized in suggesting average daily room rates by analyzing relevant data, empowering organizations to optimize their pricing strategies effectively.

In the retail industry, I've been actively involved in streamlining inventory management processes. My proficiency in SQL Server has enabled me to clean, join, and manipulate data, creating valuable views for Excel sheets that contribute to efficient inventory control.

Moreover, my repertoire includes leveraging APIs to collect and analyze social media data. By utilizing the Facebook API, I've been able to extract valuable insights from Facebook and Instagram clients' social media activities. I take pride in my ability to present these findings in comprehensive Power BI reports, providing my employers with actionable intelligence to enhance their social media strategies.

One of my significant achievements has been automating report generation, saving valuable time and resources. By utilizing Python scripts in AWS Lambda, I have seamlessly collected and updated data in Google Sheets through the Google API, delivering accurate and real-time information for informed decision-making.

Furthermore, I have adeptly employed Python's Selenium package to scrape data, facilitating data-driven solutions and enriching the analytical process.

I am deeply committed to continuously enhancing my skills and staying up-to-date with the latest advancements in data analytics. I thrive on challenging projects that allow me to explore innovative solutions and make a tangible impact.

If you are looking for a data analyst who can bring valuable insights, automation, and analytical prowess to your organization, I'd be thrilled to connect and explore potential collaborations. Let's join forces to drive data-powered success together!

Experience

Data Analyst
Analytics Station
Sep 2020 - Present (3 years 1 month)

Data Analyst
Analytics Station

Feb 2020 - Aug 2020 (7 months)

Education

Smt. Parvatibai Chowgule college
Bachelor of mathematics, Mathematics
2014 - 2017

M.E.S higher secondary school
Higher secondary, science
2012 - 2014
